Fixstars Solutions launches the **Iris-Drive**, an SSD designed for 4K video-shooting professionals.

By combining next-generation data-loss-protection with 2TB capacity of uninterrupted video recording, the Iris-Drive is a video professional's best storage option.

The last thing an HD video professional wants is data loss. As the amount of data recorded grows larger, the risk of losing precious minutes also increases. The Iris-Drive offers redundant data recording inside the drive. Even if unavoidable data loss does occur, the automatic data restoration function on Iris-Drive will be triggered to minimize the risk of losing important data.

Iris-Drive has become a certified partner for Atomos Global Pty Ltd. and designated as a recommended drive for Atomos' Shogun and Ninja Assassin series. Iris-Drive represents the storage solution made by professionals, for professionals in media and entertainment.

Satoshi Miki, CEO of Fixstars Corporation, says "What the Iris-Drive is able to offer is revolutionary. By inheriting the consistent performance, high capacity and fast read/write speed from Fixstars SSD series, the IRIS-DRIVE adds its unique value of significantly preventing frame-drop and data-loss to create peace of mind for professional filming."
