

Sharp Intros Entry-Level AQUOS BOARD Displays

Written by Marco Attard
05 September 2019

Sharp announces the addition of three "value-priced" 4K UHD interactive whiteboards to the AQUOS BOARD interactive display series-- the 70-inch PN-CE701H, 75-inch PN-C751H and 86-inch PN-C861H.

The three interactive displays offer many standard features from the AQUOS BOARD line, together with some advanced additions aimed at making lectures, presentations or lessons more creative and collaborative. UHD 4K resolution allows instructors to capture still and video images, as well as small text and complex graphics, while wireless connectivity eliminates the need for wires or adapters.

Users can simply touch the display with a portable Windows or Android device to immediately download an app allowing the easy sharing of images with the monitor. Front-facing inputs add connectivity convenience, and a built-in whiteboard and whiteboard launcher allow for instant note taking and drawing with a single tap. Instructions can annotate on-screen photos and videos using an overly function.
