Customers wanting more security for their portable storage should be satisfied with the StarTech S2510BU3PW portable hard drive enclosure, providing data security through built-in touchpad.

Windows, Mac and Linux compatible, the enclosure supports 2.5" SATA HDDs and SSDs (up to 9.5mm in height) and offers real time 256-bit AES hardware encryption via high-speed 32-bit ARM-based controller. The built-in touchpad simplifies password entry while providing access to encrypted content.

The device is USB-powered (USB to DC adapter cable included) and also provides temperature reports and a usage timer, with no need for software or drivers.
