Extron's new **TeamWork** is a simple and intuitive collaboration system that supports groups of 4 to 6 users.

To start the TeamWork system, one simply connects one of the system's "Show Me" control cables to the video output on your device.

As soon as an active signal is detected, AC power is automatically directed to the display. By pressing the "Share" button on the "Show Me" cable, the button lights and the switcher automatically selects the appropriate input.

When done, users simply disconnect and walk away, and the TeamWork system automatically turns itself off and is ready for the next collaboration session. The TeamWork collaboration system is HDCP-compliant and supports full resolution, full frame rate digital video up to 1080p/60 and analog computer-video up to 1920x1200.

TeamWork 400 and TeamWork 600 Digital Collaboration System packages are pre-configured for ease of installation with virtually any furniture system, new or currently in use.

The TeamWork system also works with most flat panel displays, laptops, and tablets.

For added flexibility, TeamWork is scalable and can be easily tailored to meet specific requirements with the addition of mounting hardware, support for legacy analog sources, and other optional accessories. The TeamWork system is designed for corporate and education applications that require a reliable, easy-to-use collaboration system that adapts to evolving needs.

"The proliferation of laptops, tablets, and other mobile devices has revolutionized the way people come together to work on projects, with multiple, smaller collaboration spaces taking the place of traditional meeting rooms or classrooms on corporate and college campuses around the world," says Casey Hall, VP Sales and Marketing for Extron.

Each TeamWork system package is ready for installation and includes HDMI "Show Me" cables, a switcher, a system controller, a **Cable Cubby** enclosure with four US AC outlets, and other necessary system cables. TeamWork supports legacy analog computer sources with the optional TeamWork VGA Kit. Mounting hardware is also optionally available to facilitate different collaboration table or work surface designs.
