FSR starts shipping the Wire Marshall Under-Table Wire Management (WM-CMPT) System-- a complete solution for tying FSR table boxes to the company's line of floor box and poke-thru solutions.

The Wire Marshall System promises clean and elegant cable management in table designs lacking a pedestal for hiding cables and power as they transition from table boxes to the floor. The WM-CMPT system consists of the WM-UTC Under Table Channel for dressing cables horizontally along the table underside.

It has a unique shape and a rubber-like edge allowing cables to enter and exit the channel at any point along its length. Each 57cm track has mitered ends to create corners or allow cables to pass into the Cable Pathway (WM-P). For longer custom installations the 1.5m WM-UTC5 is available.

The WM-CP Cable Pathway provides a 63.5 to 76cm adjustable height pathway from the table underside to the floor for an integrated solution handling multiple low-voltage AV/data and AC cables. It easily opens to allow the addition of low-voltage or AC cables each in an own divided section, providing an elegant and sturdy cable transport solution. The top of the Cable Path has a built-in service loop storage area to neatly bundle excess cable.

A WM-LC Leg Channel is also available for dressing cables along the backside of a round table leg.
