Comprehensive Connectivity Company launches the HDBaseT Wall Plate Extender TX/RX Kit (CHE-HDBTWP230K), able to extend HDMI, VGA and audio signals up to 70m over a single unshielded twisted pair network patch cable.

The kit includes one wall plate and one receiver. Connection to the wall box uses 90° cable connectors. Input source sequence selection comes through auto, front button or a control device connected via serial RS232.

The kit supports any OS with no driver setup, while bi-directional power allows easy connection to either wall plate or receiver end. HDBaseT includes HDCP and EDID, and handles resolutions up to UHD (3840x2160) and HD (1920x1080).

The HDBaseT wall plate extender kit is available now.
