

KEMP Balance Outage Recovery Load

Written by Marco Attard
05 October 2010

KEMP Technologies launches 2 new business continuity and data recovery appliances. The LoadMaster DR and Virtual LoadMaster (a virtual appliance), quickly detect datacenter disruptions and divert traffic to the best available site in case of outage.

Both Loadmaster DR and VLM DR divert traffic to the recovery site when the primary site is down. LoadMaster DR load balances traffic across 2 or more sites ensuring best datacenter availability.

The LoadMaster DR also offers "Round Robin" and "Least Connections" load balancing for all active datacenters, which includes a chained failover option for disaster recovery.
