Masergy Adds to SDN With Cloud Router

Written by Marco Attard
20 February 2015

Masergy launches the Cloud Router-- a full-featured managed router service complementing the company's on-premise Managed Router solutions, designed to reduce the capital expenses of proprietary routing hardware.

Available in Standard and Advanced service levels, the Cloud Router service supports bandwidths of up to 100Mbps, with the Advanced version including a business continuity/disaster recovery option.

"It is Masergy's heritage to innovate and create flexible solutions that reduce the complexity of running global networks," the company says. "With the introduction of our Cloud Router, Masergy is uniquely positioned to help our customers cost-effectively use the latest technologies to support their specific business requirements. Expect to see additional SDN and NFV innovations in the near term."
