InfoComm sees Platinum Tools launch the VD MapMaster 3.0-- a cable testing tool for  Cat-7, Cat-6A, Cat-6, Cat-5e, Cat-5, Cat-4, and Cat-3 shielded and unshielded cables, voice and coax.

“Based on the tremendous success of the award-winning VDV MapMaster 2.0, our 3.0 brings continuity testing, mapping, tone generator, and length measurement to the next level in one easy-to-use unit,” the company says. “Whether your jobs are commercial or residential, the versatility and added features of the VDV MapMaster 3.0 makes it a best value cable verifier for the professional installer.”

The MapMaster 3.0 identifies and maps 20 locations at one time. It also features a large backlit display, glow-in-the-dark keypad, built-in flashlight and audible beep verification to help installers working in the dark.

“The VDV MapMaster 3.0 raises the bar for value-featured testers in this price range,” Platinum Tools adds. “Installers are asking for more than just a cable test and measurement tool. We’ve also added port blinking to allow port identification on switches that cables are connected to. Single-ended testing for shorts drastically reduces trouble-shooting with the MapMaster 3.0. It is the ideal instrument for installation, troubleshooting, and maintenance on telco, network, or coax cable in any situation.”

The VDV MapMaster 3.0 is shipping now.
