

Fastest Thin Client Within the Cloud?

Written by Marco Attard
08 October 2010

Wyse Technology claims its latest thin client, the Wyse R10L, is the "fastest" with a superscalar 1.5GHz GPU which supports dual high-res displays, as well as rotation and L-shaped modes.

The client is built on R10L hardware and the latest Wyse ThinOS 7.0. ThinOS takes advantage of a unique unpublished API which therefore provides built-in protection from viruses and malware.

The R10L uses Wyse's Zero engine cloud software and ThinOS multiprotocol capability. It updates and configures itself automatically, without the need for separate management software.
