

CSC Updates Big Data PaaS

Written by Marco Attard
27 June 2014

CSC adds security, compliance, data infrastructure and cloud deployment to its Big Data Platform-as-a-Service (BDPaaS) offering as it continues to integrate its product portfolio.

The CSC BDPaaS offers batch analytics, fine-grained and interactive analytics, and real-time streaming analytics from all big data offerings, including Facebook and Google, with reference architectures from IBM, SAP, Oracle and Teradata.

It supports several cloud infrastructures, including Amazon, CSC Cloud Solutions, OpenStack and Vsphere private clouds. Customers can also leverage on the ServiceMesh Agility Platform for management, governance and security across public, private and hybrid clouds.

"CSC is uniquely positioned to support predictive and prescriptive analytics for actionable insights from internal and external data to better manage customer intelligence, product innovation, risks and operational efficiencies," the company claims. "Clients can minimize up-front costs and leverage existing technology investments without sacrificing time-to-market mandates. We're helping clients unlock the power and potential of big data with greater speed, efficiency and confidence."

According to IDC the big data technology and services market is set to grow from \$12.6 billion in 2013 to \$32.4bn in 2017 with a CAGR of 27%.
