

Cloud-based financial software provider NetSuite announces "significant" features designed to help wholesale distributors optimise operations across warehouse management, eCommerce, order management and procurement.

Such features come in the shape of WMS Lite-- an extension of native NetSuite inventory and warehouse capabilities designed for less complex warehouses , retail stores serving as a distribution channel in an omnichannel world and trucks, trailers and other non-traditional environments serving as distribution centres.

WMS Lite automates manual warehouse processes, adds RF mobile handheld scanning, provides real-time access into transaction and inventory movements, and integrates into existing NetSuite implementations in "a matter of weeks" without disruptions.

Also announced is Intelligent Order Management-- a means for distributors to meet customer expectations and streamline the complexities of omnichannel order orchestration. Automatic location assignment allows vendors to enable a fulfill-from-anywhere solution across all channels, with control over automated release-for-fulfillment processes, exception management, order management insights and KPIs.

“Rapidly evolving customer expectations, increased competition and global distribution networks are forcing wholesale distributors to innovate the company says. “With these enhancements, NetSuite provides a unified system with the tools they need to transform their business today and the flexibility to adapt to the challenges of tomorrow.”

NetSuite Adds Functionality for Disties
