

Datapipe Acquires Adapt

Written by Marco Attard
26 August 2016

Datapipe expands further in Europe with the acquisition of Adapt, a UK-based managed cloud services provider and advanced AWS consulting partner, for an undisclosed sum.

Adapt is a specialist in agile hybrid solutions combining the best of public and private clouds in a single service. Both companies take a transformative approach to cloud, partnering with enterprises to innovate, optimise and scale mission-critical and day-to-day operations.

“Adapt and Datapipe both have cultures that focus on proactive, high-touch customer service and a commitment to customer specific solutions designed to meet clients’ individual business challenges,” Datapipe says. “Our similar approach to guiding client’s on their cloud journey makes the acquisition a natural fit for us and will increase our scale and service capabilities in the UK, and the broader European market.”

This is the second recent acquisition for Datapipe after DualSpike, the AWS assessment, automation and migration company. As the company puts it, it is set to gain further capabilities in the management of multiple cloud platforms, including AWS, Microsoft Azure and its own hosted private cloud, Stratosphere.
