Black Box's 4-port ServSwitch Freedom

Written by Marco Attard
12 November 2010

The ServSwitch Freedom is a 4-port KVM switch for simplifying USB keyboard/mouse access to multiple computers.

The user switches ports by moving the mouse from monitor to monitor, hotkeys or front panel.

The devices uses True Emulation technology to ensure all characteristics of the connected peripherals are passed to each system.

No software installation is required on the connected computers.
