

Chromebooks in Education via Splashtop

Written by Marco Attard
26 September 2014

Splashtop adds Chromebook support to its Classroom and Mirroring360 education technology solutions-- providing Chromebook-using schools with features previously available on iPads, Android devices, PCs and Macs.

Splashtop Classroom allows teachers to share lesson content and app with student devices. Additions within the latest version include cloud support, streaming audio and the ability for students to control lessons via Chromebooks and other devices.

Meanwhile Mirroring360 allows students to wirelessly mirror their iOS and Chromebook displays to projectors via PCs or Macs. The latest update allows students to mirror content and stream live videos from Chromebooks to classroom PCs, allowing for BYOD and blended classroom initiatives.

Splashtop says Chromebooks can also extend the life of existing classroom equipment such as projectors, SMART and interactive whiteboards.
