Pure Storage Buys Compuverde

Written by Frederick Douglas
04 April 2019

Pure Storage gains more hybrid storage capabilities through the acquisition of Sweden-based Compuverde, a developer of file software solutions for enterprises and cloud providers.

Through the purchase, Pure Storage plans to further expand file capabilities, allowing it to offer "true hybrid architectures" for customers wanting to leverage data on-premises, in the cloud or both. Compuverde also brings an ecosystem of technology partnerships, not to mention a client base of global organisations in the telecom, financial services and media industries.

"We're excited about the opportunities that the Compuverde team and technology bring to Pure's existing portfolio," the company says. "As IT strategies evolve, enterprises look to leverage the innovations of the public cloud in conjunction with their on-prem solutions. Through our expanding suite of hybrid data solutions such as Cloud Data Services, we continue to help our customers make the most of their data assets."

The two companies did not disclose the financial terms of the deal. The acquisition is set to close on April 2019.
