

QSC Buys Attero Tech

Written by Frederick Douglas
04 October 2019

QSC announces the acquisition of Attero Tech, a deal bringing together the Q-SYS audio, video and control ecosystem with the Attero Tech range of networked AV endpoints and I/O peripherals.

The purchase also boosts the development capabilities of QSC, since the Attero Tech engineering staff will join the multi-national QSC team.

“This acquisition is a natural next step for our organizations given our long relationship, highly compatible portfolios and the exceptional shared values and company cooperation that have developed over the last several years,” QSC says. “Both QSC and Attero Tech were early adopters of network audio transport technology, including CobraNet, Dante and AES67. In addition, when QSC expanded the control capabilities of the Q-SYS Ecosystem in 2017, it allowed Attero Tech to become the first manufacturer partner to independently develop Q-SYS Control integration plugins, and has since developed 20 plugins for their portfolio of I/O devices.”

Founded in 2005, Attero Tech provides audio networking I/O endpoints and AV connectivity solutions. Meanwhile QSC is a designer and manufacturer of high-performance loudspeakers, digital mixers, power amplifiers, audio processors, digital cinema solutions and the Q-SYS software-based audio, video and control platform.
