

Samsung demonstrated the benefits of its **Smart School solution** at InfoComm.

Its large touch display and eBoard software enhances classroom interactivity between teachers and students, allowing tablet content to be shared with the entire class.

A 65" eBoard works with both Windows-based PCs and Android operating systems, as well as the Samsung Galaxy Tab, allowing teachers to move freely around the room while giving interactive lessons. Teachers can also share specific student screens as well as interactive content like quizzes and polls.

Our rAve USA video shows how Samsung is clearly leveraging its range of products to give schools more reason to buy Samsung instead of separate suppliers (for example, buy an all-Samsung deal instead of a Smart board and Apple iPads...)
