

Clear-Com Celebrates 50th Birthday at ISE

Written by Marco Attard
02 March 2018

50-year old Clear-Com continues its birthday celebrations at ISE 2018 with the presentation of the enhanced LQ series of IP interfaces allowing seamless connection with intercom systems over IP.

Being brand-agnostic, the LQ series interfaces use IP to securely connect industry-standard 2-wire and 4-wire intercom systems over IP networks. LQ also interfaces 3rd party SIP/VoIP telephony over existing intercom systems, meaning intercom users can make direct telephone calls over connected SIP-based phone systems.

LQ series devices can also bridge traditional analog and digital partyline intercom systems with IP communications such as the Agent-IC, the free Clear-Com app turning iOS and Android devices into fully-featured mobile user panels. It connects to any Clear-Com or 3rd party intercom via wifi, 3G, 4G and LTE networks, and provides point-to-point calling, point-to-multi-point group calling, partyline, PTT, local cross-point audio level control and notification functions.

Customers can connect up to 8 licensed Agent-IC mobile app clients to each LQ device, allowing easy and cost-effective intercom expansion.
