

Arrow and Nutanix Extend Collaboration

Written by Alice Marshall
12 January 2018

Arrow Enterprise Computing Solutions (ECS) extends its contract with hyper-converged solutions provider Nutanix-- one leading to distribution agreements with Nutanix in France and Benelux.

The deal also involves the strengthening of existing collaborations in Spain, Portugal and Scandinavia.

"Converged and hyper-converged solutions have fundamentally changed the way that the modern data centre is designed, offering scalable platforms for the demands driven in terms of scalability, and management" Arrow ECS says. "They combine sophisticated compute, storage and software layers resulting in much greater efficiency. Nutanix is a key player in this market and we look forward expanding our collaboration."

The main Nutanix offering is Enterprise Cloud OS-- a combination of computing, virtualisation and storage able to securely deliver a broad range of enterprise applications and services across multinational locations. It offers a web-scale infrastructure for the design, deployment and management of datacentres promising to be simpler and more efficient than datacentres built using legacy architecture.
