eyevis, German maker of high quality visual display and video wall solutions, buys the business of Teracue AG near Munich.

Teracue, manufacturer of hardware and software products of IPTV solutions and video networking, has already been transferred with all rights on trademarks, names and patents as well as all employees into a new **Teracue eyevis GmbH**. With this takeover, eyevis and Teracue combine their strengths and resources in product development and distribution to set new trends in streaming solutions for professional applications.

eyevis, German manufacturer of large scale video systems, is one of the leading providers and integrators of visualization systems for professional applications in control rooms, virtual reality and simulation as well as in the areas of broadcast and AV.

"The acquisition is a win-win situation for both companies," underlines Michael W. Nagel, CEO of eyevis GmbH. "With the increasing demand on high-quality streaming systems, together with Teracue we are offering unique solutions in the areas of control room, presentation and information, and broadcast from one source. Teracue will benefit from our large international sales network which will significantly expand their existing sales channels. Through this acquisition eyevis will expand its expertise in streaming solutions as well as signal transmission over standard IP systems. Our customers will benefit from our strengthened position as a comprehensive provider of intelligent solutions for networking and visualisation."

First joint products were presented at ISE 2014 with eyevis' **eyeCON MetaWall 2.0** solution. Wolfgang Schmiegelt and Karl-Heinz Wenisch from the former board of management of Teracue AG are now managing directors of the new Teracue eyevis GmbH.
