

Revolabs Intros Elite Wired Microphones

Written by Marco Attard
06 February 2015

Revolab launches the Elite Wired range of microphones, featuring the same form factor and design as the Executive Elite series with "elegant" colours and "highly acclaimed" audio engineering.

Designed to bring state-of-the-art sound capture to any conferencing or UC application, the Elite Wired microphones come in GSM noise-resistant omnidirectional or directional (cardoid) models.

The microphones also offer an optional mounting adapter to provide lockdown capabilities for settings requiring fixed microphone locations, and can be used in tandem with the Revolabs wireless solutions portfolio. Thus customers can easily increase the maximum number of microphones in a single space while combining wireless flexibility with the security of wired microphones.

The Elite Wired range is shipping now in black, white and brushed nickel colours.
