Prysm Launches Prysm Enterprise

Written by Marco Attard
19 February 2016

Prysm shows off Prysm Enterprise at ISE 2016-- a hardware and Software as a Service (SaaS) solution allowing users to collaborate from any location and any device via cloud-based visual workspaces.

The visual workspaces combine applications, content, video conferencing and the web, and provide a space for users to create, edit, share and store work. Users can go back and reaccess saved workspaces from any location through the cloud.

Included in Prysm Enterprise is Prysm Mobile-- a technology enabling browser-based access to the Prysm Application Suite through any mobile device. It allows the real-time participation of up to 25 users, and supports iOS, Android and Windows devices.

Another Prysm Enterprise addition is an integrated Skype for Business experience. Meanwhile the Prysm Cloud enables applications services with dedicated and multitenant options.

Also seen at ISE 2016 is a 98-inch Psyrm display. The company offers displays ranging from 65- to 190-inch.

Prysm Enterprise is available now, and Prysm Mobile follows from Q2 2016 together with the 98-inch display.
