

Diversified Launches Visual Huddle

Written by Marco Attard
21 October 2016

The Diversified cloud-based conferencing solution, Visual Huddle, is a re-launch of the TI-VMRplus service. It comes in 3 different licensing models-- My Meeting Video, content sharing and integrated directories.

Visual Huddle provides video, voice and recording capabilities on a secure, redundant and high capacity private global network enabling connectivity to over 12000 cities across 190 countries. It supports existing room-based endpoints (such as Polycom and Cisco) and is compatible with all major collaborative platforms, including Skype for Business, Jabber, Polycom Real Presence and WebRTC.

Such interoperability ensures participants can join meetings from different kinds of networks, systems and standards, including iOS and Android device.

Visual Huddle is available now.
