Barco says global shipments of the ClickShare wireless content sharing solution total over 300000, marking it as "the preferred solution for worry-free collaboration in every meeting room, huddle room and boardroom."

“Since its launch, our patented wireless presentation system has steadily gained in popularity, with more than 40 percent of Global Fortune 1000 companies using ClickShare technology today," the company says. "ClickShare has secured an impressive, global market share on its promise of simplicity, zero-learning curve and user-friendliness. With its large, patented portfolio and trusted partner network, ClickShare is strengthening its position as the meeting room platform of the future.”

Barco adds the Barco Connect! partner program was a key enabler to actively team up with the ClickShare global distributor and reseller network and expanding the sales effort. The company has a reseller base of over 5000 across the globe, and EMEA sales are up by 37% compared to last year.

In February the ClickShare offering got a new flagship model-- the CSE-800, a two output 4K version.
