

Skype-to-VoIP Gateway System

Written by Marco Attard
05 May 2011

The first IP software Skype gateway on the market, MESSiX (Multiline Enterprise Software Skype Exchange) is a Skype-to-VoIP system that connects Skype network with H.323 and SIP networks.

A software solution that runs on a single computer, MESSiX works as a router that should be placed between Skype and H.323 or SIP networks. It supports up to 32 concurrent lines.

An audio or video call can be placed to anyone (PSTN or remote user with Skype) directly from the employee desk phone or from a video conferencing room and as simple as a standard call.

MESSiX software contains an embedded evaluation, so you can try it before buying (what you see and experience is what you get).
