Extron AV control can now be part of **Logitech SmartDock** and **Tap** collaboration spaces. Extron's working with Logitech through the **Logitech Collaboration Program** to extend easy automation and professional control integration capabilities to modern workspace.

The Logitech SmartDock and, shortly Logitech Tap, can be equipped with Extron control systems, audio signal processors, and digital video switching and distribution for a fully-integrated, unified collaboration solution.

Meeting attendees will benefit from a significant expansion of meeting collaboration features while enjoying the convenience of AV room control, all from a familiar user interface. **Extron Control for Logitech SmartDock** is available now, and **Extron Control for Tap** will be available soon.

"This is an exciting time, as Extron and Logitech have combined complementary technologies to provide powerful, turn-key collaboration solutions for the modern meeting space," says Casey Hall, VP Worldwide Sales and Marketing for Extron. "Logitech SmartDock and Logitech Tap are automating the meeting experience for huddle spaces or any environment that can benefit from the convenience of combined communication and powerful AV room control."

In addition to the easy, Extron on-screen control interface, meeting rooms can integrate video
