

1 Beyond Debuts AutoTracker 3 Camera

Written by Frederick Douglas
19 September 2019

1 Beyond announces the AutoTracker 3, a camera with NDI allowing for automatic presenter tracking over AV-over-IP workflows using just one cable to provide power, control and the NDI video stream.

NDI is a NewTek IP technology allowing the camera to provide video streams users can view using NDI-compatible software or hardware anywhere on the same network.

The camera produces high and low resolution NDI video streams (H.264 and 1G), and the bitrate of the stream is adjustable in the camera. Once the camera is configured over the network, users can control it using any 3rd party control device with support for VISCA over IP to turn tracking on or off.

The AutoTracker 3 has the same features of previous AutoTracker cameras, including dual 1080p or 720p HD-SDI outputs, PoE+ power, 20x optical zoom and automatic camera functions such as focus and white balance.
