

An AVer Solution For Sharing Content in Conference Rooms

Written by Alice Marshall
14 May 2020

AVer announces the AW200, a 4K wireless presentation system for sharing content in conference rooms able to act as a stand-alone wireless presentation system within an existing network.

The AW200 includes a main receiver and two transmitter pods enabling the wireless or wired streaming of media at up to 4K resolution with WPA2-PSK wifi security. The plug-and-play design of the hardware does not require additional software or drivers for installation and connectivity. Each AVer 4K Pod features a button to tap to initiate sharing, and includes an HDMI and Mini DisplayPort input to support a variety of device types. The system is also compatible with Apple AirPlay and Google Cast.

Split-screen mode allows up to four input sources to share the screen simultaneously, enabling collaboration and interactivity across multiple users. The AW200 supports a number of popular platforms, including macOS, iOS, Chrome OS, Windows and Androids. Users can bring PCs, laptops, tablets and smartphones to any meeting, with quick setup and sharing across various device types. As needs increase to share screens at the same time, customers can expand the AW200 system with additional 4K Wireless Pods to accommodate up to 32 users.
