

Polycom: Integrated Video Collaboration Whiteboard Solution

Written by Marco Attard
01 December 2011

It's a common problem: remote participants in videoconference often have trouble seeing the whiteboard content. Now the **Polycom UC Board** solution combines a compact infrared sensor that attaches to a whiteboard or LCD screen, and a wireless stylus that meeting hosts can use to sketch, write, and annotate as they would use a pen or marker.

"The Polycom UC Board is the first integrated video collaboration solution to make sharing whiteboard content as easy as picking up a pen," says Sudhakar Ramakrishna, Executive VP/GM of UC solutions and chief development officer, Polycom.

The Polycom UC Board is a simple solution combining a plug-and-play receiver and stylus for ease-of-use, and a compact design for portability. The software natively integrates with the latest Polycom RealPresence Room HDX solutions.

As part of the solution, Polycom leverages **eBeam** technology from Luidia. eBeam turns many common flat surfaces into collaborative workspaces where the capture, saving, and sharing of digital content is made easy.

The Polycom UC Board solution is available in USA at US\$1999.
