

Taiden's newest all-in-one conferencing solution, aimed at executive boardrooms and government meeting facilities, is the **Taiden HCS-8328**-- what the company calls a **Paperless Multimedia Congress Terminal**.

The features and capabilities of the Taiden HCS-8328 unit go beyond any other conference system we've seen.

Like standard systems, the unit has a 10" touch screen, a microphone and a built-in speaker, supporting discussion, electronic voting and language interpretation.

On top of that, thanks to the touch screen and built-in video camera, users can also watch live video, access the file server, share PowerPoint presentations, vote on corporate resolutions, listen to far end audio or even capture the video of the speaker from the on-board camera for video conferencing.
