Vaddio announces the ConferenceSHOT FX-- an enterprise-level fixeB camera the company says plays well with major UCC soft clients, including Skype for Business, WebEx, Google Hangouts and Zoom.

The ConferenceSHOT FX connects to PCs via USB 3.0, with no drivers or configuration required. Designed for small conference rooms and huddle spaces, it offers an extra-wide 88-degree field of view plus x3 optical zoom with configurable presets and manual pan/tilt controls.

It shoots at 1080p/60fps for the smoothest video available. A web-based user interface provides remote configuration, management and control, and users can either automatically or manually adjust image colour, shading, backlight and wide dynamic range to optimise colour for different settings.

The ConferenceSHOT FX is shipping now.
