

Yealink presents a 2nd generation videoconferencing solution aimed at huddle room use at ISE 2018-- the VC200, an all-in-one solution featuring camera and codec in a slim design customers can mount on top of monitors or TVs.

The VC200 features a 4K camera equipped with x4 lossless zoom, E-PTZ support and a wide-angle 130-degree lens able to fit all meeting participants without need for camera adjustments. A built-in 6 beamforming microphone array takes care of audio, while 16GB of storage handle any required recording.

Video transmission uses the H.26/HEVC codec. An included USB wireless dongle allows content sharing via wifi or Bluetooth, while power comes through PoE. Further connectivity comes through x1 HDMI-out and x1 Line-out ports.

The VC200 ships from March 2018.
