

The Fujitsu Phone-PC Hybrid

Written by Marco Attard
13 March 2014

Fujitsu believes always-on business PCs consume too much power as it reveals the Esprimo X923 at CeBIT 2014-- an All-in-One (AIO) PC featuring unified communications capabilities and a special power-saving mode.

It carries a 23-inch display, Intel Core i4, i5 or i7 processors, up to 16GB RAM, storage via 1TB HDD or 500GB SSD and 6 USB ports together with UC features such as microphone, adjustable webcam, presence sensor and face-recognition software.

A X923-T variant replaces the LED display with a touchscreen.

The so-called low-power active mode (LPAM) pauses power-consuming applications such as browsers and office suites, but continues running Windows for telephone and video conferencing use. According to Fujitsu LPAM consumes just 5W, down from the 56W regular use requires.

The Fujitsu Phone-PC Hybrid
