# NEC Showcases UC Solutions

Written by Marco Attard
06 June 2014

The 2014 NEC Solutions Showcase housed more than digital signage-- NEC also took advantage to show off what it calls "The Smart Enterprise" via its Univerge 3C unified communications solution.

Univerge 3C combines voice, video and online collaboration within a single software platform. It runs as an integrated UC client across a wide range of IP client devices, including Windows, Mac, and Android devices.

The client handles presence, schedule-based availability and messaging management with a simple point-and-click/drag-and-drop interface.

"Univerge 3C works consistently across multiple devices and at multiple locations-- the boardroom, the coffee shop, the home office, etc," the company says. "As workforces are becoming more mobile we're keen to show that productivity can be increased, enabling companies to achieve what we call at NEC 'The Smart Enterprise'."

Also seen at the show is new UC hardware integrating Android devices, video and other applications.
