

Fujitsu Intros Cloud-Based UC

Written by Marco Attard
18 July 2014

Fujitsu steps into cloud-based unified communications with Cloud Enterprise Communication Service (ECS) Connect-- a first such offering from the company able to scale from 1500 to 100000 end users.

The company says ECS Connect is a full-feature hosted UC solution complete with instant messaging, presence indicators, audio and video calling, conferencing and cloud-based desktop sharing. It allows the placing and receiving of phone calls from mobile devices, soft phones, PCs, tablets, desk phones and other devices, and supports a variety of Microsoft solutions including Lync, Exchange, SharePoint and Office 365.

To ensure QoS and optimised spend the Fujitsu offers each UC customers an end-to-end actual voice traffic and network bandwidth assessment, as well as analysis of the requirements for transition towards a fully integrated UC system.
