

Yamaha Forms Dedicated UC Department

Written by Marco Attard
09 June 2017

Yamaha confirms its commitment to the unified communications (UC) market with the development of a dedicated UC department leveraging the expertise of subsidiary Revolabs.

The new department will include Revolabs, and should focus on communications solutions while developing products to help organisations reach their business goals.

Acquired by Yamaha in 2014, Revolabs allowed the Japanese company to enter the UC market. Revolabs is well known for high-quality audio and conferencing solutions, and integration with leading UC providers and software leaders such as Microsoft, Google, Cisco and Zoom.

Revolabs will continue designing, producing and selling UC products under the Yamaha brand. New products will combine the strengths of both companies in definition, design and production, and both Yamaha and Revolabs will provide cross-solution support to address the growing range of business communications applications.

The recently announced Yamaha CS-700 Video Sound Collaboration System for Huddle Rooms is the first UC product joint-engineered by the two companies. It combines Revolabs microphone expertise with Yamaha audio expertise and quality control. Also included is a wide-angle HD camera, another Yamaha addition.
