

Crestron Expands Microsoft Teams Support

Written by Frederick Douglas
16 March 2018

Crestron boosts the support of Microsoft solutions with Microsoft Teams integration-- equipping meeting spaces of every size with what it calls "innovative intelligent communications technology."

As a result, Crestron SR and the Crestron Mercury conference system can run Microsoft Teams in spaces ranging from huddle rooms and multi-purpose rooms to executive meeting rooms and large auditoriums. Organisations can repurpose Skype for Business hardware, and receive Teams enhancements such as Cortana voice integration and background blurring as they are rolled out.

"Crestron provides customers with a broad selection of solutions for any room type, while also providing customers the ability to migrate to Teams over time without costly changes to hardware," the company says. "Together, we offer a broad portfolio of solutions that meet the most stringent security requirements, while natively supporting Skype for Business and Microsoft Teams."
