

Avaya Offers Devices as a Service

Written by Alice Marshall
20 December 2018

Avaya presents means for businesses to purchase desktop devices on a monthly subscription basis with Device as a Service (DaaS), providing an alternative to either buying devices up front or looking for financing.

The Avaya DaaS offering offers the latest smart devices, including the Vantage portfolio, the Essential Experience J100 series IP phones and the B109, B179 and B189 conferencing device. The devices are platform agnostic, meaning they can be deployed on both Avaya or non-Avaya UC platforms.

Customers can contract with terms of 1, 3 or 5 years, with longer terms offering lower monthly prices, and contracts can be upgraded to more advanced devices at any time without penalty.

“Our customers and partners have been asking for this and we are very excited to announce this new offer,” Avaya says. “It brings a new level of simplicity to UC as a Service (UCaaS) where customers can now enjoy the best cloud service and latest cloud devices, all on one monthly bill.”
