---

Kramer Electronics launches Kronos at ISE 2019-- a secure, enterprise-class cloud-based room booking and scheduling platform promise to streamline and automate the management side of room booking.

Due to integration with Kramer Control, administrators can use room availability as a trigger to automatically control room elements. 802.11x and Transport Layer Security (TLS) encryption on all communication to and from the scheduling touchpanels and the cloud-based Kronos server ensure all sensitive booking and scheduling information is secure.

Kronos offers a library of UI templates for customisation, and users can display the Kronos schedule on a room display using a VIA device when no presentation takes place. The system works seamlessly with other scheduling platforms, including Microsoft Exchange, Office 365 and G Suite, and is also compatible with iOS and Android tablets.

“Kramer Kronos is a key component of the Kramer meeting room ecosystem”, the company says. “The new meeting culture demands simplicity-- you book a meeting, arrive at the room and that’s it. No need to waste time turning on a projector or air conditioning. With Kramer Kronos, this can now be achieved.”
