Key Digital launches the KD-CAMUSB-- a USB camera with pan, tilt and 10x zoom functionality aimed at video conferencing and capture applications in huddle spaces, conference rooms, board rooms and the like.

The KD-CAMUSB features multiple wall and ceiling mounting options with included mounting hardware, and can also be table surface mounted. It works easily via USB drivers for Windows 7/10, Linux and Mac OS X 2, and is compatible with Skype, GoToMeeting, Microsoft Teams, Zoom, RingCentral, Google Hangouts and more.

Users can store and recall up to 255 presents, with up to 12 presets accessible via IR remote control on home, privacy and numeric buttons for quick viewing of desired room perspectives and participants. Home and Privacy settings remain adjustable with a single button press. RS232 and VSCA integration allow control with major control systems and camera control consoles.

The camera handles video resolutions from 320x240p at 30fps up to 1920x1080p at 30fps, and is adjustable via Windows camera viewer and conferencing software setting panels.
