Cerevo, the IoT startup based in Tokyo, brings out the **LiveShell X**, the latest model in its line of LiveShell series devices that enable you **to live stream without the need for a PC.**

Priced at \$699, LiveShell X lets you handle up to 3 simultaneous streams in Full HD video broadcasting without the need to rely on a PC for live streaming. The multi-streaming function enables you to stream multiple services simultaneously while sending video to a backup server. You can also broadcast multiple streams to one streaming service with different bit rates. Realtime recording during live streaming

It has H.265/H.264 live encoding up to 1080/60p. And LiveShell X features leading edge H.265/AAC encoding, supporting video at up to 1080/60fps and a bit rate of 20Mbps.

LiveShell can record to a microSD card directly, to make a backup copy for your H.265/H.264 encoding live broadcasts. You preview on your tablet and can use VLC player to view a realtime output preview (360p resolution). And you can add subtitles, logos and graphics to your live streaming.
