

MSE Audio Debuts SoundTube Entertainment STNet Switch II

Written by Alice Marshall
10 July 2019

MSE announces the SoundTube Entertainment STNet Switch II-- a proprietary Power over Ethernet (PoE) rack-mountable switch designed for use in Dante networks featuring 16 ports.

Designed for pairing with STNet IPD speakers, the STNet Switch II is a 1-RU, 16-port gigabit switch. A 700W power supply guarantees a proprietary 40W PoE to each SoundTube IPD speaker on the switch. While optimised for Dante, the STNet Switch II also features advanced management flexibility through the addition of a user-adjustable built-in DHCP server and two SFP ports for fibre or additional ethernet connections.

"Incorporating Dante-optimisation to the STNet Switch II creates a simple-to-use system with a wide range of interoperability and functionality," MSE Audio says. "The SoundTube Entertainment STNet line is designed to be efficient, economical and versatile through Dante-enabled functionality."

The STNet Switch II is available now.
