---

MSE Audio announces a joint sales initiative with Attero Tech packaging Axiom Audio Wall Plates and Axon C1 Zone Control Wall Plate with the SoundTube Entertainment IDP-Hub2 and Remote Volume Control Plate.

The SoundTube Entertainment IPD-Hub2 brings IP-based PoE technology to both commercial and residential markets with an alternative to traditional audio distribution systems. The IPD-Hub2 uses Dante infrastructure and Attero Tech uniFY software to provide performance monitoring and EQ/DSP control to individual speakers from any computer with a network connection.

Through the partnership with Attero Tech the IPD-Hub2 and Remote Volume Control Plate create a highly integrated package solution. Paired with SoundTube Entertainment passive ceiling speakers, installers can design cost-effective single- and multi-zone audio systems. The IPD-Hub2 features a native Axiom port allowing the additions of Axiom wall plates to create local inputs to the Dante network. IPD-Hub2 setup and control is supported in uniFY software to enable a single control application for all SoundTube Entertainment and Attero Tech products in the system.

The IPD-Hub2 amplifier makes the heart of a complete networked audio system with local and Dante inputs for simplified network control addressing the requirements of residential and commercial audio connectivity. Designed to provide a complete IP-based system, it features two-channel DSP amplification with a multitude of power options, including PoE, PoE+, 40W PoE and 24V option for local power supply.

Meanwhile the Axiom features a single-gang audio wall plate with audio networking inputs via proprietary Axiom bus. The ML1 provides a 3.5mm input (summed to mono), XLR input and volume knobs. the Axiom USB1 is a plug-and-play USB audio I/O solution. The Axon C1 is a flexible IP-based control solution for networked AV systems enclosed in a single gang Decora in-wall design with an OLED display and rotary encoder. Paired with uniFY Control Panel software, the C1 menu provides application-specific customisation and offers a simple control solution for functions such as volume/mute control and preset recall.
