

Extron SMP 300 Series Integrates With Panopto

Written by Alice Marshall
13 December 2019

Extron announces means to seamlessly integrate SMP 300 series streaming media recorders to Panopto enterprise video management systems-- the LinkLicense for Enhanced Panopto Features.

The LinkLicense enables users to live stream to Panopto and fully manage SMP recording schedules for lectures and presentations with the Panopto video platform. This brings additional capability to existing control driver solutions currently available.

“This is a very exciting time as we take our integration with Panopto a step further by natively incorporating our SMP 300 Series with the Panopto video platform,” Extron says. “Whether it be simple push button control, or hands-off, fully-automated recording and streaming for any environment, Extron is taking AV control, media capture, and content management to a new level of efficiency and simplicity in the professional AV industry.”

Upgrading an SMP 300 series product with the LinkLicense is a simple way to expand and enhance the power of Extron capture and control drivers, enabling unparalleled integration with the Panopto Video Platform.
