We speak to Jason Skillicorn, Lighthouse Sales and Marketing Director, at ISE 2011 about the company's latest LED products-- the Impact and DuoLED series.

Impact is 4-colour LED panel series just launched at ISE 2011. The 2 Impact panel models (at 12mm and 16mm pixel pitch respectively) boast high brightness (6000 nits) and aim for outdoor installations such as stadiums.

Lighthouse are soon going to install a 100 square meter Impact 12-series screen at Carphone Warehouse's flagship office in the UK, Skillicorn says.

The Impact series panels are IP65 rated, with front and rear access, easy release IM structure and carry the first outdoor SMD LED chip.

Skillicorn also talks about the company's DuoLED series-- lightweight mesh products transforming into standard display products thanks to an innovative shutter system closing behind the mesh (giving the panels a solid appearance as required).

DuoLED panels come in either 12mm or 18mm pixel pitch and weigh around 9kg.
