

B-Tech Curves Display Installations

Written by Alice Marshall
03 August 2018

B-Tech AV Mounts releases the BT8390-AAC (Angle Adjustment Connector), an angled bracket allowing for creative, curved installations using System X mounting technology.

The bracket fixes between two System X rails to provide an angled joint. With angle capability up to 45-degrees, the connector is designed for assembling video walls and menu boards in curved configurations.

In addition to the angle adjustment connector, the B-Tech BT8333 curved menu board and a range of curved videowall stands will be available soon. The BT8373, BT8374, BT8375 and BT8376 utilise B-Tech bases to give freestanding, mobile and bolt down options, and are pre-configured with B-Tech angled bracket.

The BT8390-AAC is available now.
