

AOpen: Digital Signage's Warm Touch

Written by Bob Snyder
15 December 2011

AOpen Europe announces the availability of the **WarmTouch WT22M-RH**, an all-in-one multi-touch panel PC.

With its 21.5" multi-touch display with a LED backlit panel, the WT22M-RH has a built-in PC based on the AOpen Digital Engine technology including the Intel Core i3 Processor.

It supports dual channel DDR3 memory for high performance. The Watchdog functionality can trigger a corrective action to automatically recover from lockups, eliminating IT support or helpdesk calls.

With an aluminium casing with a dust/water resistant panel and body, it is designed to handle intense use in a variety of scenarios.

AOpen also provides two foot stands for direct deployment. Whether in a retail environment, at tradeshow, in hospitality or in a business setting, the WT22M-RH is fully customizable and can serve different needs: e.g., as a digital kiosk with touch functionality, interactive information display, interactive way finding board, digital menu board and others.
