---

WolfVision's new vSolution line includes the **VZ- 9.4F** and **VZ-9.4L** Desktop Visualizers, as well as the **VZ-C6** Ceiling Visualizer. In addition to the ability to display both 'live' and external sources, they feature onboard HD video capture with audio, enabling the recording of complete multimedia presentations and lectures.

External display material from connected PCs or tablets, such as digital images, PowerPoint, PDFs, or webpages can all be captured, including audio. Presentations can be streamed to computers, tablets or smartphones, either on an internal network or over the internet.

The **VZ- 9.4** Series and **VZ- C6** Visualizers offer integrated WLAN, 8GB internal memory plus additional USB stick memory expansion, and HDMI input and output. The VZ- 9.4L and VZ- C6 Visualizers feature WolfVision's Synchronized Lasermarkers and a Synchronized Lightfield, respectively, for easier positioning of objects. The VZ- 9.4F has a native 1080p HD camera with up to 60 frames per second; the VZ- 9.4L comes with a native 720p HD /WXGA camera at 30 fps; and the VZ- C6 has a native 1080p HD camera with 30 fps.

All three Visualizers are compatible with WolfVision's new **vConnect for iPad** software that enables it to be used as a multimedia control dashboard. Presentations can be stored either locally on the iPad or in Dropbox and can be displayed on screen to audiences or via the in-app
