---

Besides their familiar pen-based e-Board series, **Legamaster** now offers a very fast 10-point touch system.

e-Board Touch features "a touch experience as fast as a tablet". The largest format in the series is a 93" board, with a 237 cm projection diagonal. With an aspect ratio of 16:9, this board is suitable for Full-HD display offered by the latest projectors.

77 inch and 87 inch formats are available for different aspect ratios (4:3 and 16:10).

A totally new frame has been developed for these multi-touch interactive boards, featuring the typical Legamaster aluminium design. The interactive board is suitable for highly intensive use in schools and other presentation locations.

The touch technology, combined with the special Legamaster board surface, means that writing on the e-Board Touch "feels like writing on paper."

The touch technology has 4 cameras and 3 active IR LED strips that enable true multi-touch applications on all operating systems developed for this purpose, including Android and Windows 8.

Legamaster e-Board Touch is for use in both the educational and business markets. Each board is delivered with annotation software as well as a 5-user licence for the comprehensive educational package, **Easiteach Next Generation**.
